AMENDMENT UNDER 37 C.F.R. § 1.111 Attorney Docket No.: Q92943

Application No.: 10/595,084

AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the

application:

LISTING OF CLAIMS:

1. (currently amended): A method for producing a rubber master batch comprising a step

of mixing a natural rubber latex with a slurry solution of a filler previously dispersed into a

liquid, characterized in that a static mixer or a high shear mixer comprising a rotor and a stator

portion and having a shear speed of not less than 2000/s is used in the mixing of the natural

rubber latex and the slurry solution.

2. (previously presented): A method for producing a rubber master batch according to

claim 1 or 13, wherein the filler is at least one selected from the group consisting of carbon

black, silica and an inorganic filler represented by the following formula (I):

 $nM_1 \cdot xSiO_y \cdot zH_2O$ ···· (I)

wherein M1 is at least one selected from the group consisting of a metal of aluminum,

magnesium, titanium, calcium or zirconium, oxides and hydroxides of these metals, their

hydrates, and carbonates of these metals, n is an integer of 1-5, x is an integer of 0-10, y is an

integer of 2-5, and z is an integer of 0-10.

3. (canceled).

4. (canceled).

2

Attorney Docket No.: Q92943

AMENDMENT UNDER 37 C.F.R. § 1.111

Application No.: 10/595,084

5. (previously presented): A method for producing a rubber master batch according to

claim 1, wherein an amide bond in the natural rubber latex is decomposed with a protease.

6. (previously presented): A method for producing a rubber master batch according to

claim 1, wherein the natural rubber latex is mixed with the slurry solution, and the resulting

mixture is coagulated to have a water content of 5-40 mass%, and the coagulated mass is dried

while applying a mechanical shearing force.

7. (original): A method for producing a rubber master batch according to claim 6,

wherein the drying is performed by a screw-type continuous milling machine.

8. (previously presented): A rubber master batch produced by the method as claimed in

claim 1 or 13.

9. (original): A rubber composition comprising a rubber master batch as claimed in

claim 8.

10. (previously presented): A tire comprising a rubber composition as claimed in claim

9.

11. (previously presented): A belt comprising a rubber composition as claimed in claim

9.

3

AMENDMENT UNDER 37 C.F.R. § 1.111 Attorney Docket No.: Q92943

Application No.: 10/595,084

12. (previously presented): A method for producing a rubber master batch according to

claim 1, wherein the natural rubber latex and the slurry solution are substantially simultaneously

charged.

13. (currently amended): A method for producing a rubber master batch comprising a

step of mixing a natural rubber latex with a slurry solution of a filler previously dispersed into a

liquid, characterized in that the natural rubber latex and the slurry solution are substantially

simultaneously charged into a static mixer-is used in the mixing of the natural rubber latex and

the slurry solution and mixed with the static mixer.

14. (previously presented): A method for producing a rubber master batch according to

claim 13, which further comprises a step of coagulating the resulting mixture with using a

coagulating agent after the step of mixing by the static mixer.

15. (canceled).
